What's Happening with the Weather?

The National Weather Service says we are currently experiencing an active monsoon-type weather pattern in the U.S. that could lead to some improvements in drought conditions across the western parts of the country.

We are also currently experiencing hurricanes in Hawaii and the Gulf of Mexico, while there are no hurricanes in the Atlantic, which is very surprising.

We are looking forward to wetter conditions, which should help keep fires from spreading.

Tropical Activity

Hurricane in Hawaii
(Hurricane Hone)

Hurricane in the Gulf
of Mexico
(Hurricane Milton)

New Hurricane in Mexico
(Hurricane John)
(recently formed)

No Hurricanes
in the Atlantic

No hurricanes
in the Atlantic

More Rain, Less Fire Risk

According to the National Weather Service, wetter conditions can help reduce fire danger. Additional rainfall can also help refill reservoirs that may be needed in case of fires. Some reservoirs have fallen to as low as 27% of their capacity.

Some reservoirs
are at 27% capacity.

So, How Does This Affect Your Landscape?

- **More rainfall:** Wetter conditions can give your plants and soil much-needed moisture after a dry period.
- **Lower water bills:** Wetter conditions could mean less irrigation and lower water bills.
- **Please have us trim your trees:** With changing weather conditions, keeping your trees properly trimmed can help keep your landscape safe and healthy.
- **Pros and cons:** There are both pros and cons to wetter conditions, and we will be prepared to help your landscape through whatever weather comes our way, including drains, check your roofs.

The Bigger Picture

Wetter conditions will hopefully provide some much-needed relief for drought, landscapes, wildfire conditions, and water supplies.

Drought relief

Less wildfire spread

Refilled reservoirs

Healthier landscapes

*Better weather.
Stronger landscapes.
A safer tomorrow.*
